

Problem Statement: Personal Finance Tracker

Objective: Build a **Personal Finance Tracker** application where users can track their income, expenses, and savings over time.

Features:

1. **Create:**
 - Add an income or expense entry with:
 - Amount, Category (e.g., Food, Entertainment, Salary), Date, and Description.
2. **Read:**
 - View a summary of total income, total expenses, and balance.
 - Filter entries by category, date range, or type (income or expense).
3. **Update:**
 - Edit income or expense entries (e.g., modify the amount, category, or description).
4. **Delete:**
 - Remove an income or expense entry.

Bonus Features:

- Implement monthly or yearly financial summaries.
- Allow users to export their data to a CSV file

Evaluation Criteria:

- Handle invalid inputs gracefully.
- Code readability, comments, and exception handling.
- Meaningful git commit messages.
- Integrate Swagger
- Maintain a postman collection which should have examples for your api responses.

API Overview

- **POST** `/api/v1/entries` - Create an income or expense entry.
- **GET** `/api/v1/entries` - Get all entries.
- **GET** `/api/v1/entries/{id}` - Get an entry by ID.
- **PUT** `/api/v1/entries/{id}` - Update an entry.
- **DELETE** `/api/v1/entries/{id}` - Delete an entry.
- **GET** `/api/v1/summary` - Get total income and total expenses.
